VIVA BLACK

MONOLITH

VIVA D

MONOLITH VIVA is an oval bathtub with a generous, symmetrically shaped interior space that literally embraces you. These parameters are especially appreciated by taller people or families with children. Timeless shape, large interior space with drain in the middle – these are the features that make you fall in love with this bathtub.

MONOLITH

ASTRA DR

MONOLITH ASTRA Compared to the VIVA bathtub, this model has an asymmetrically bevelled lying area, its use is therefore intended for one person. However, the inside of the bathtub is spacious and comfortable enough. The advantages of this model are its modern design, compact dimensions and its drain located in the center of the tub bottom.

MONOLITH

MARLENE CURVE R

MARLENE CURVE BLACK

MONOLITH MARLENE CURVE is a modern large bathtub, whose shape impresses with its unusual combination of square outer edges and one rounded corner. The acrylic drain cover accentuates the clean design of the bathtub with no distracting protrusions. The inner space of the bathtub promises a comfortable bath, especially for taller people or families with children.

ROSANA

MONO

ROSANA

MONOLITH ROSANA has simple modern shapes, clean lines and offers real comfort. Its spacious design is more suited to families with children or for a relaxing bath for two. The slope of the back wall is gradual and the drain is placed in the center of the tub bottom, so that the bath can be enjoyed undisturbed by everyone.

- ☞ The MONOLITH Infinity system was designed specifically and exclusively for MONOLITH acrylic bathtubs, taking into account the specific placement of components and the limited space under the bathtub. A completely new type of directionally adjustable water jets in combination with an increased number of air jets makes bathing in a MONOLITH bathtub a unique experience. Its minimalist electronic control ensure that the full potential of the designed system is exploited.
- ☞ You no longer have to worry about how to surround the whirlpool bath and what tiles to choose, or whether a complementary acrylic cover panel will not interfere with the look of your dream bathroom. With the Infinity whirlsystem, you can combine the aesthetics of precision workmanship offered by the MONOLITH collection with the relaxing element of a classic massage.
- ☞ The Infinity massage system includes a Hydro and a Hydro&Air massage option. Both types offer a choice of additional accessories, such as the Stream Clean disinfection rinse, Chromo Plane illumination, or bath temperature reheat with safety thermostat.
- ☞ By combining the Infinity massage system with the MONOLITH acrylic bathtub, we take relaxing bathing pleasure to a whole new level.

MONOLITH

≡ The **MONOLITH** bathtubs impress with their precise workmanship and clean design.

≡ The bathtub with the tiling panel forms a monolithic block with a sharp edge, which, in addition to its elegant appearance, guarantees easy maintenance.

≡ The stable construction, sharp outer edges, integrated support legs and low weight also ensure easy and quick installation.

AKRIPOL All MONOLITH bathtubs are made of premium acrylic from the manufacturer Akripol. The Akripol acrylic board is specially developed for applications in sanitary environment. It is manufactured by casting 100 % PMMA acrylic between two glass sheets. Its cross-laminated bond and specific chemical structure enable production of high quality bathtubs, shower trays and other sanitary products. It offers a unique combination of properties including aesthetics, durability and very smooth surface. The material is warm to the touch, easy to clean, UV resistant and fully recyclable.

Light as a feather. Compared to freestanding bathtubs made of cast marble, MONOLITH bathtubs are significantly lighter. Their weight is around 30 kg, including packaging. Handling the tubs is therefore very easy thanks to the portable box with handle.

MONOLITH bathtubs are handmade from start to finish. Each of the bathtubs is therefore a unique product and also an example of precise craftsmanship.

To install a MONOLITH bathtub it is not necessary to use complicated tools and equipment. After unpacking, the bathtub is simply connected to the prepared waste pipe, moved to the wall and cleaned with silicone. Nothing more, nothing less.

Installation of the MONOLITH bathtub is not time-consuming. The time saved can be spent on other finishing work.

MONOLITH bathtubs can be equipped with the Infinity whirlsystem on request.

A drain set is not included in the product. An overflow bath set with a minimum length of 775 mm must be used for the bathtub.

MONOLITH

MONOLITH bathtubs are manufactured using a unique technology of cold bonded acrylic plates. The joint between the front panel and the bathtub itself is created by a special process using fibreglass, resin and other binding materials.

The resulting joint is as strong as the acrylic board itself. This process achieves a joint that forms a monoblock of both materials.

which is then milled to its final shape. The outer edges are sharpened and adapted for installation to the wall.

The steel support legs, which are automatically included in the package of the MONOLITH bathtub, are then mounted on the bottom of the tub.

Subsequently, the tub joints are machined by multi-stage grinding and polishing of the tub edge,

polysan 

In the last stage of production, the bathtub is hand polished. Thanks to the material used, if the surface of the tub is damaged, the area can be sanded and re-polished to its original high gloss.

Until now, this has been the prerogative of bathtubs made of cast marble. The whole process is a demonstration of the craftsmanship of our production team.

In order to minimize possible damage during transport, the tub is first wrapped in foil and then placed in recyclable cardboard packaging.

The carrying handles located on the sides of the box allow for easy handling during subsequent distribution of the tubs.
